

Fix pdf export or else

Connect Google Docs API and make it write to a Google Doc (play around with the API in dev/python/google first)

Entry groups - expand outward. Groups can have custom names and colors.

Group manager window allows you to move entries from group to group. (This

would be really helpful for the to-do list. Groups could include Settings, Entry:

Debug, Font, Color schemes, Search/filter, Export, Prompts (for journaling),

Build/Install). Groups can sort their entries as ordered or unordered lists.

Entries with countdown dates and times

Entries with images

tk messagebox for giving the user feedback

Shawn's idea - journal prompts. Save them to JSON and then add the ability to make custom prompts in the Settings menu.

Put settings in a canvas with a scrollbar so that it can be scrollable

If default color scheme not found, display a message asking the user to pick a color scheme from the dropdown menu.

Allow custom fonts, in addition to the default Tkinter ones

Objects that need to refresh colors: insert prompt, file browser, and name window within file browser

Fix checked entries going to bottom

Settings: Show/hide date, time, menu buttons

Settings: add font sizes and families

File browser for loading files
